Started cycles

Cycles for fresh fertilization	Cycles with cryopreserved embryos
100-500	100-500
<i>Number of cycles in which the patient receives medication for ovarian stimulation, or ultrasound monitoring in the case of natural or replacement cycles.</i>	

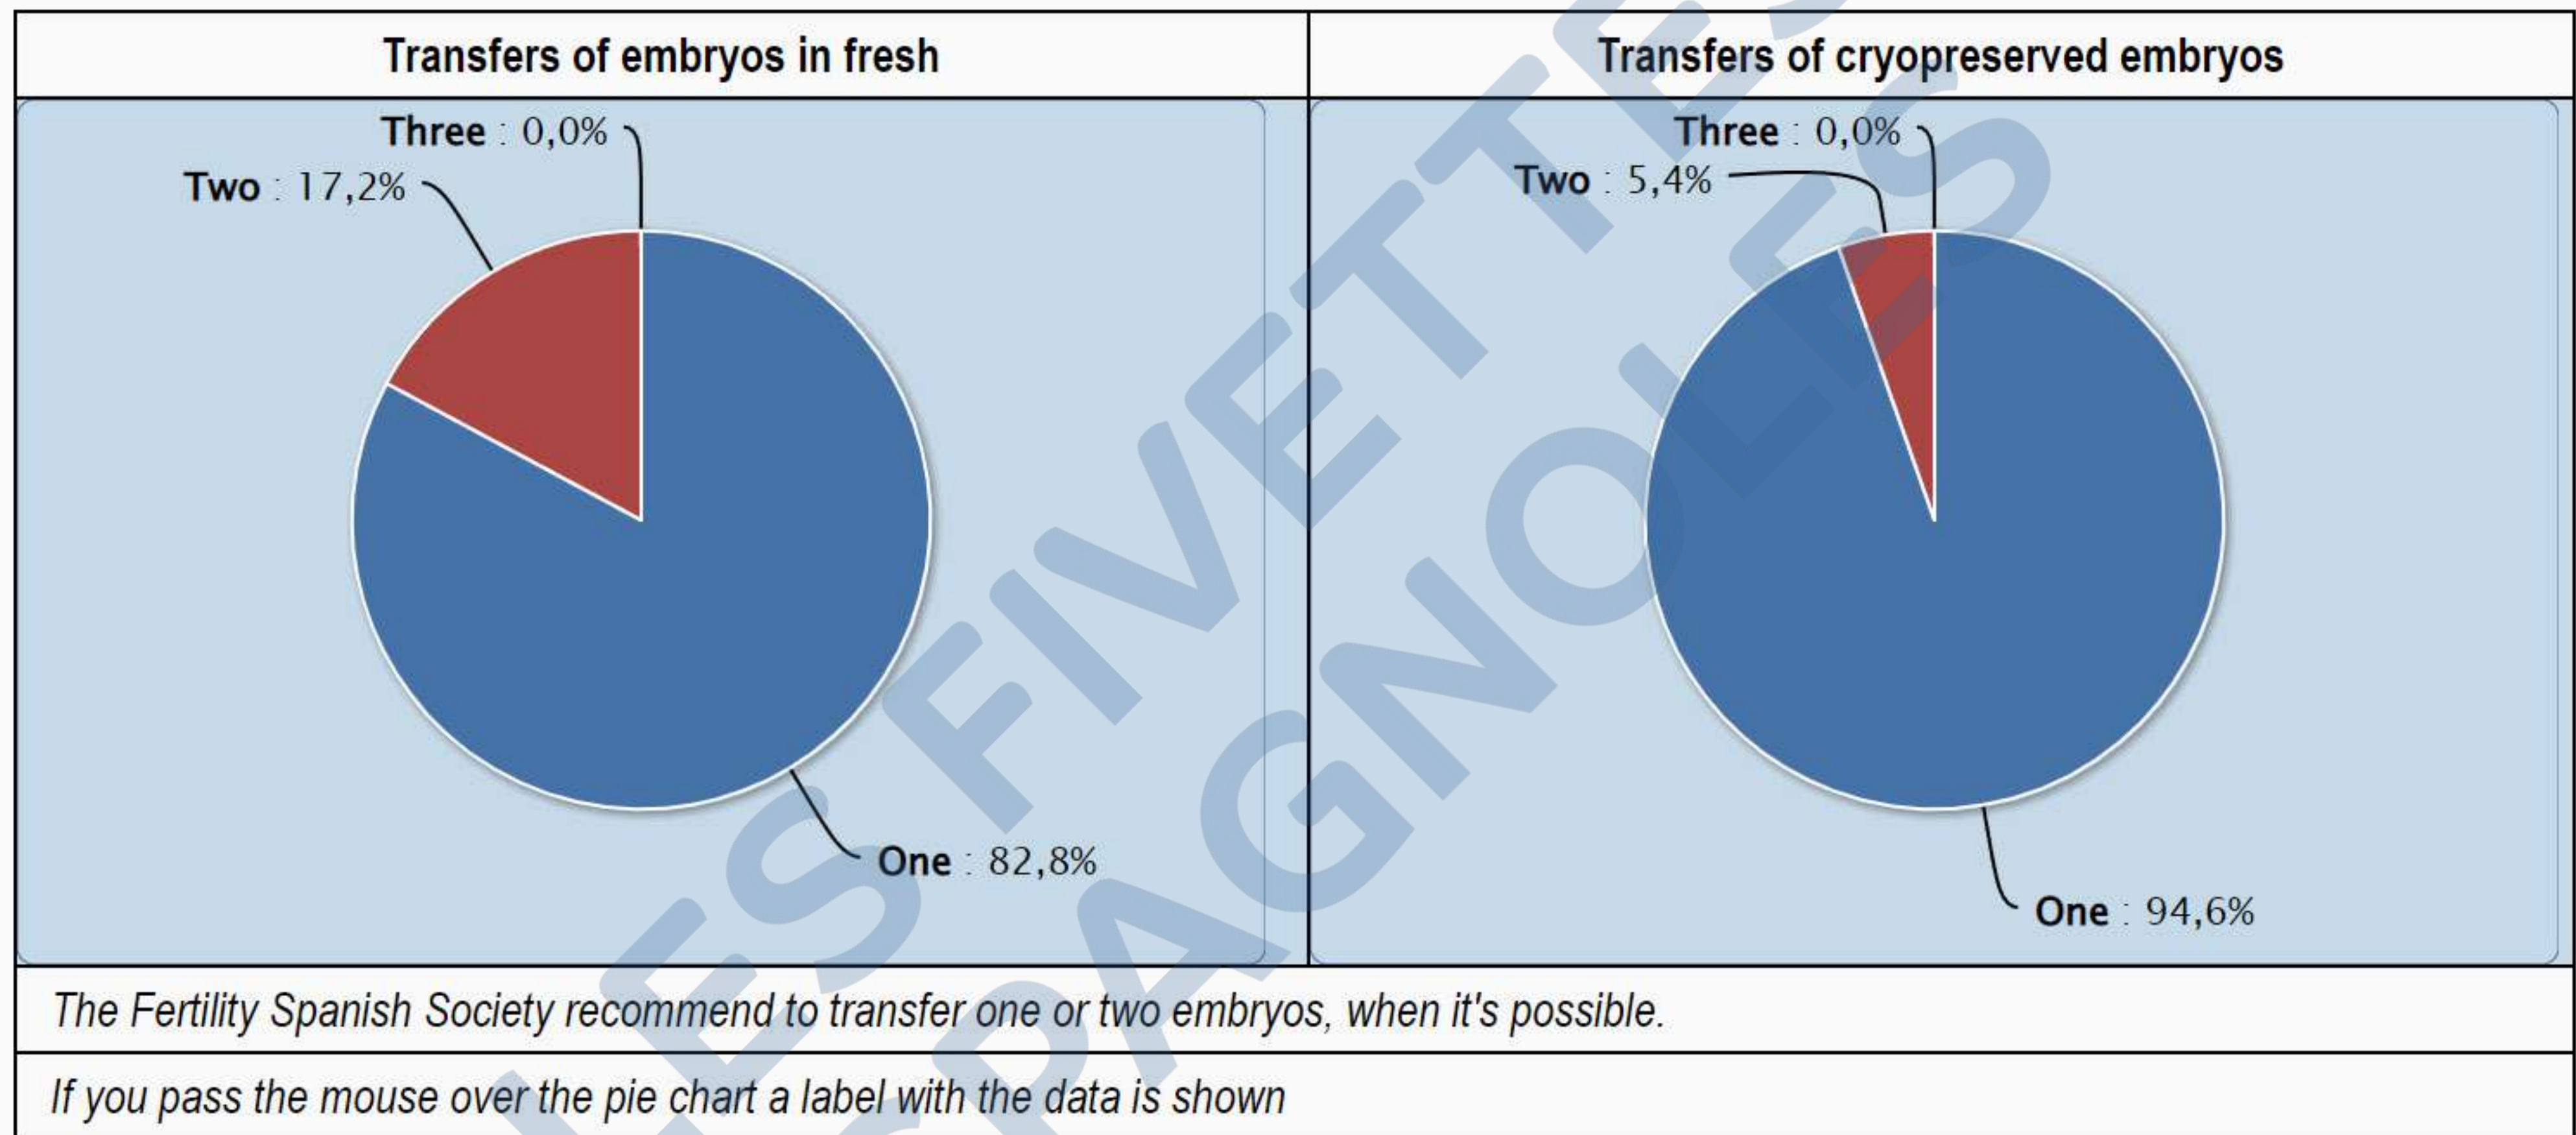

Results grouped by age of the woman

	The probability of pregnancy by embryo transfer in fresh	The probability of pregnancy by cryopreserved embryo transfer
Under 35 years	44.2 - 70.6	47.1 - 72.9
35 to 39 years	41.5 - 63.6	50.1 - 66.5
Over 40 years	0 - 100	37.9 - 62.1
<i>The comparison of results between different clinics could be misleading due to differences in types of patient and treatment. Most clinics perform around the national average.</i>		

Embryo implantation rate

Transfers of embryos in fresh	Transfers of cryopreserved embryos
43.8 - 59.4	51.1 - 62.8
<i>The probability of transferred embryo to nest in the matrix</i>	

Percentage of embryos transferred

Gestation types of transfers of embryos in fresh

	Transferring a single embryo	Transferring 2 embryos	Transferring 3 embryos
Single gestations	96.6%	66.7%	Does not apply
Twins gestations	1.7%	33.3%	Does not apply
Triple or greater gestations	1.7%	0%	Does not apply
<i>A single pregnancy is the best outcome of fertility treatments.</i>			

Gestation types of transfers of embryos cryopreserved

	Transferring a single embryo	Transferring 2 embryos	Transferring 3 embryos
Single gestations	98.5%	36.4%	Does not apply
Twins gestations	1.5%	63.6%	Does not apply

IVI Sevilla

Donated oocytes reception cycles

Cycles for fresh fertilization	Cycles with cryopreserved embryos
< 100	< 100
<i>In vitro fertilization cycles where the oocytes are provided by a donor.</i>	

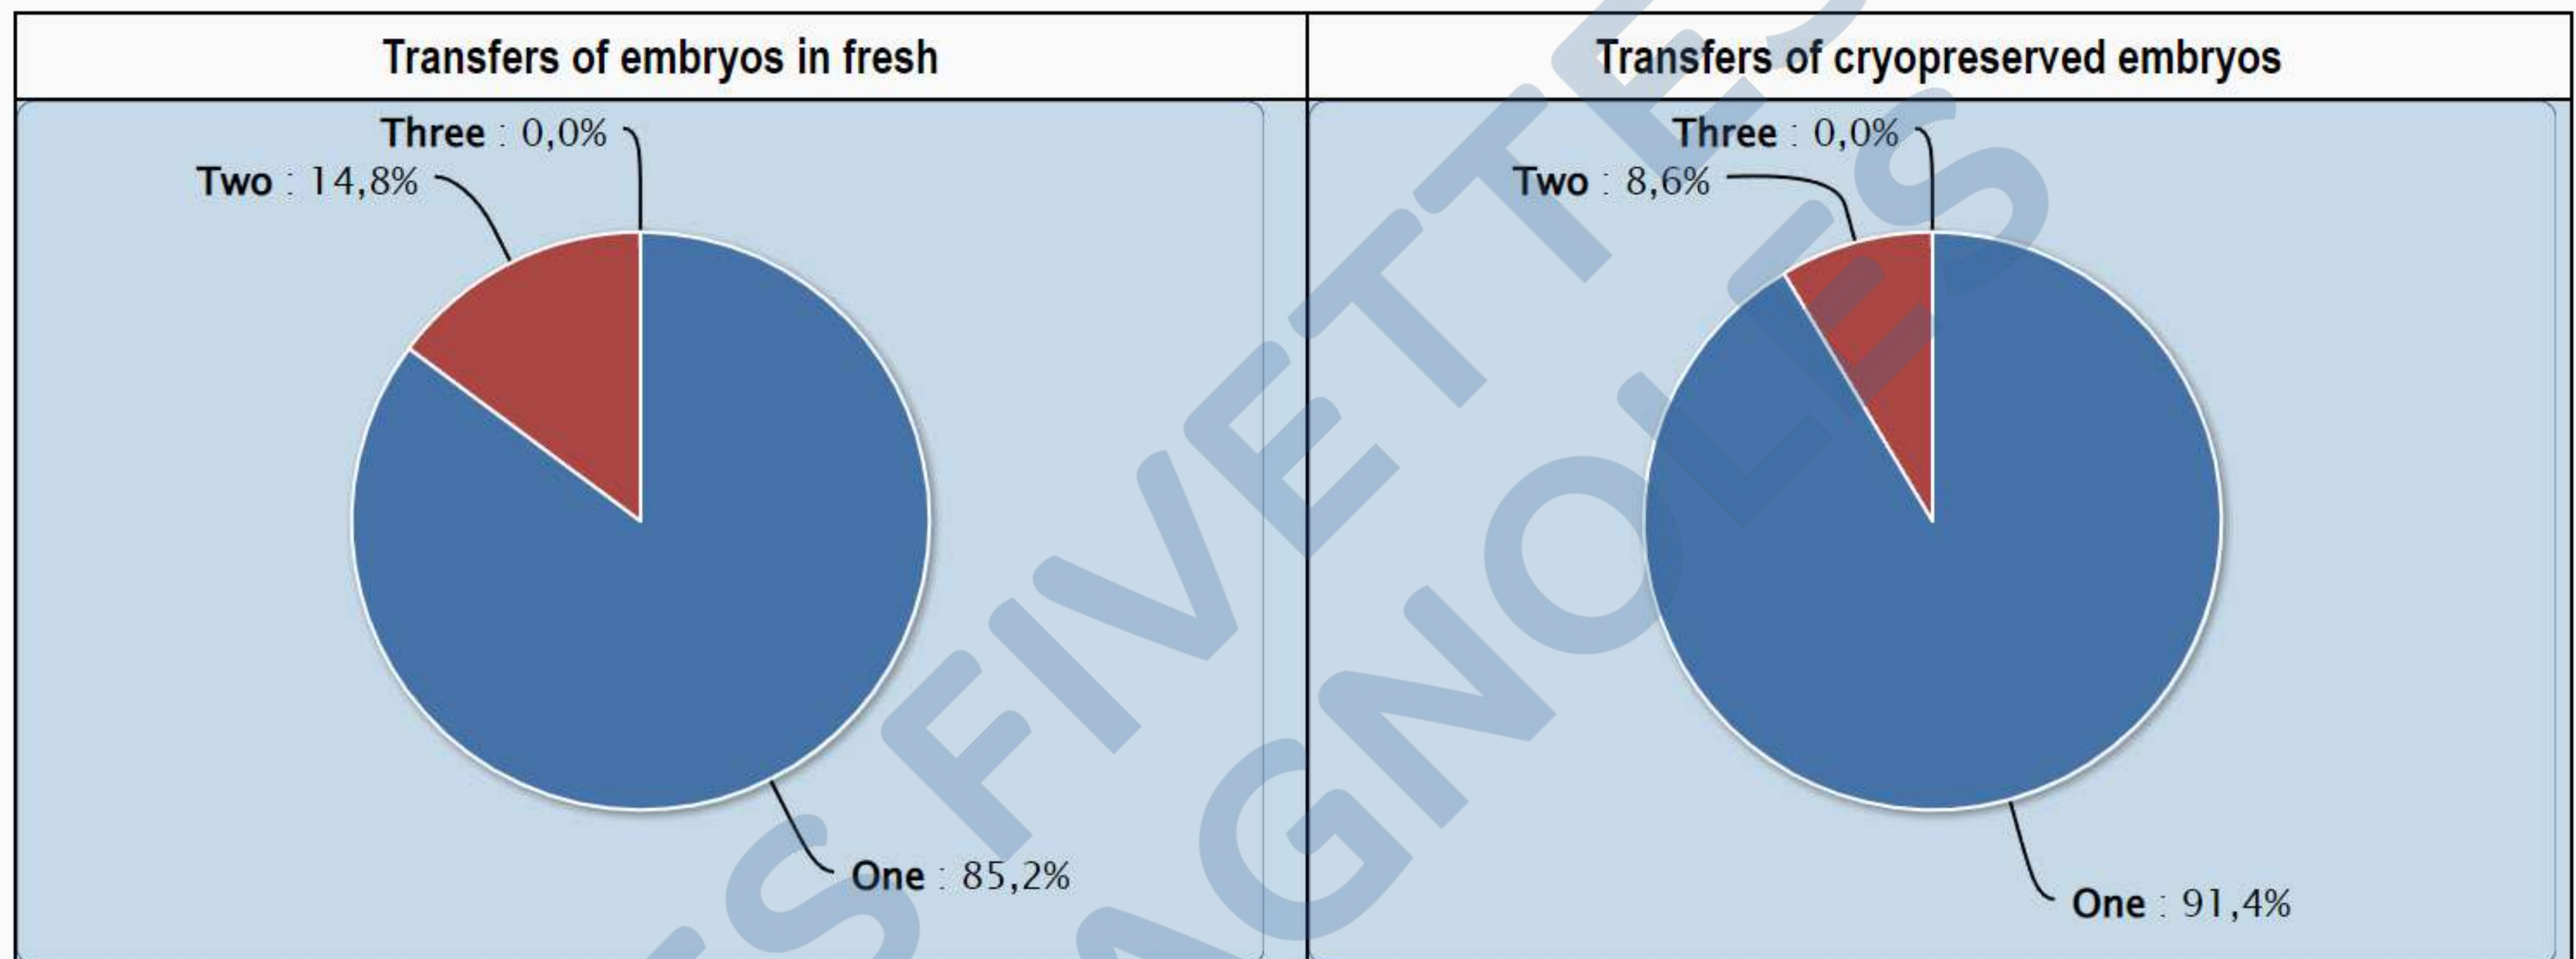

Results grouped by age of the receiving woman

	The probability of pregnancy by embryo transfer in fresh	The probability of pregnancy by cryopreserved embryo transfer
Under 35 years	13.3 - 100	10 - 90
35 to 39 years	64.6 - 100	34.2 - 74.1
Over 40 years	38.8 - 86.2	48.2 - 72.4
<i>The comparison of results between different clinics could be misleading due to differences in types of patient and treatment. Most clinics perform around the national average.</i>		

Embryo implantation rate

Transfers of embryos in fresh	Transfers of cryopreserved embryos
51.3 - 84.2	47.8 - 67.1
<i>The probability of transferred embryo to nest in the matrix</i>	

Percentage of embryos transferred

The Fertility Spanish Society recommend to transfer one or two embryos, when it's possible.

If you pass the mouse over the pie chart a label with the data is shown

Gestation types of transfers of embryos in fresh

	Transferring a single embryo	Transferring 2 embryos	Transferring 3 embryos
Single gestations	94.1%	50%	Does not apply
Twins gestations	5.9%	50%	Does not apply
Triple or greater gestations	0%	0%	Does not apply
<i>A single pregnancy is the best outcome of fertility treatments.</i>			

Gestation types of transfers of embryos cryopreserved

	Transferring a single embryo	Transferring 2 embryos	Transferring 3 embryos
Single gestations	100%	42.9%	Does not apply
Twins gestations	0%	57.1%	Does not apply
Triple or greater gestations	0%	0%	Does not apply

IVI Sevilla

IUI cycles in women under 40 years

	Women under 35 years	Women between 35-39 years
Pregnancy rate per cycle ranges between	0 - 24.3	0 - 32.2
<i>In intrauterine insemination, the sperm provided by the male partner is placed in the patient's uterus</i>		

Type of pregnancies in IUI

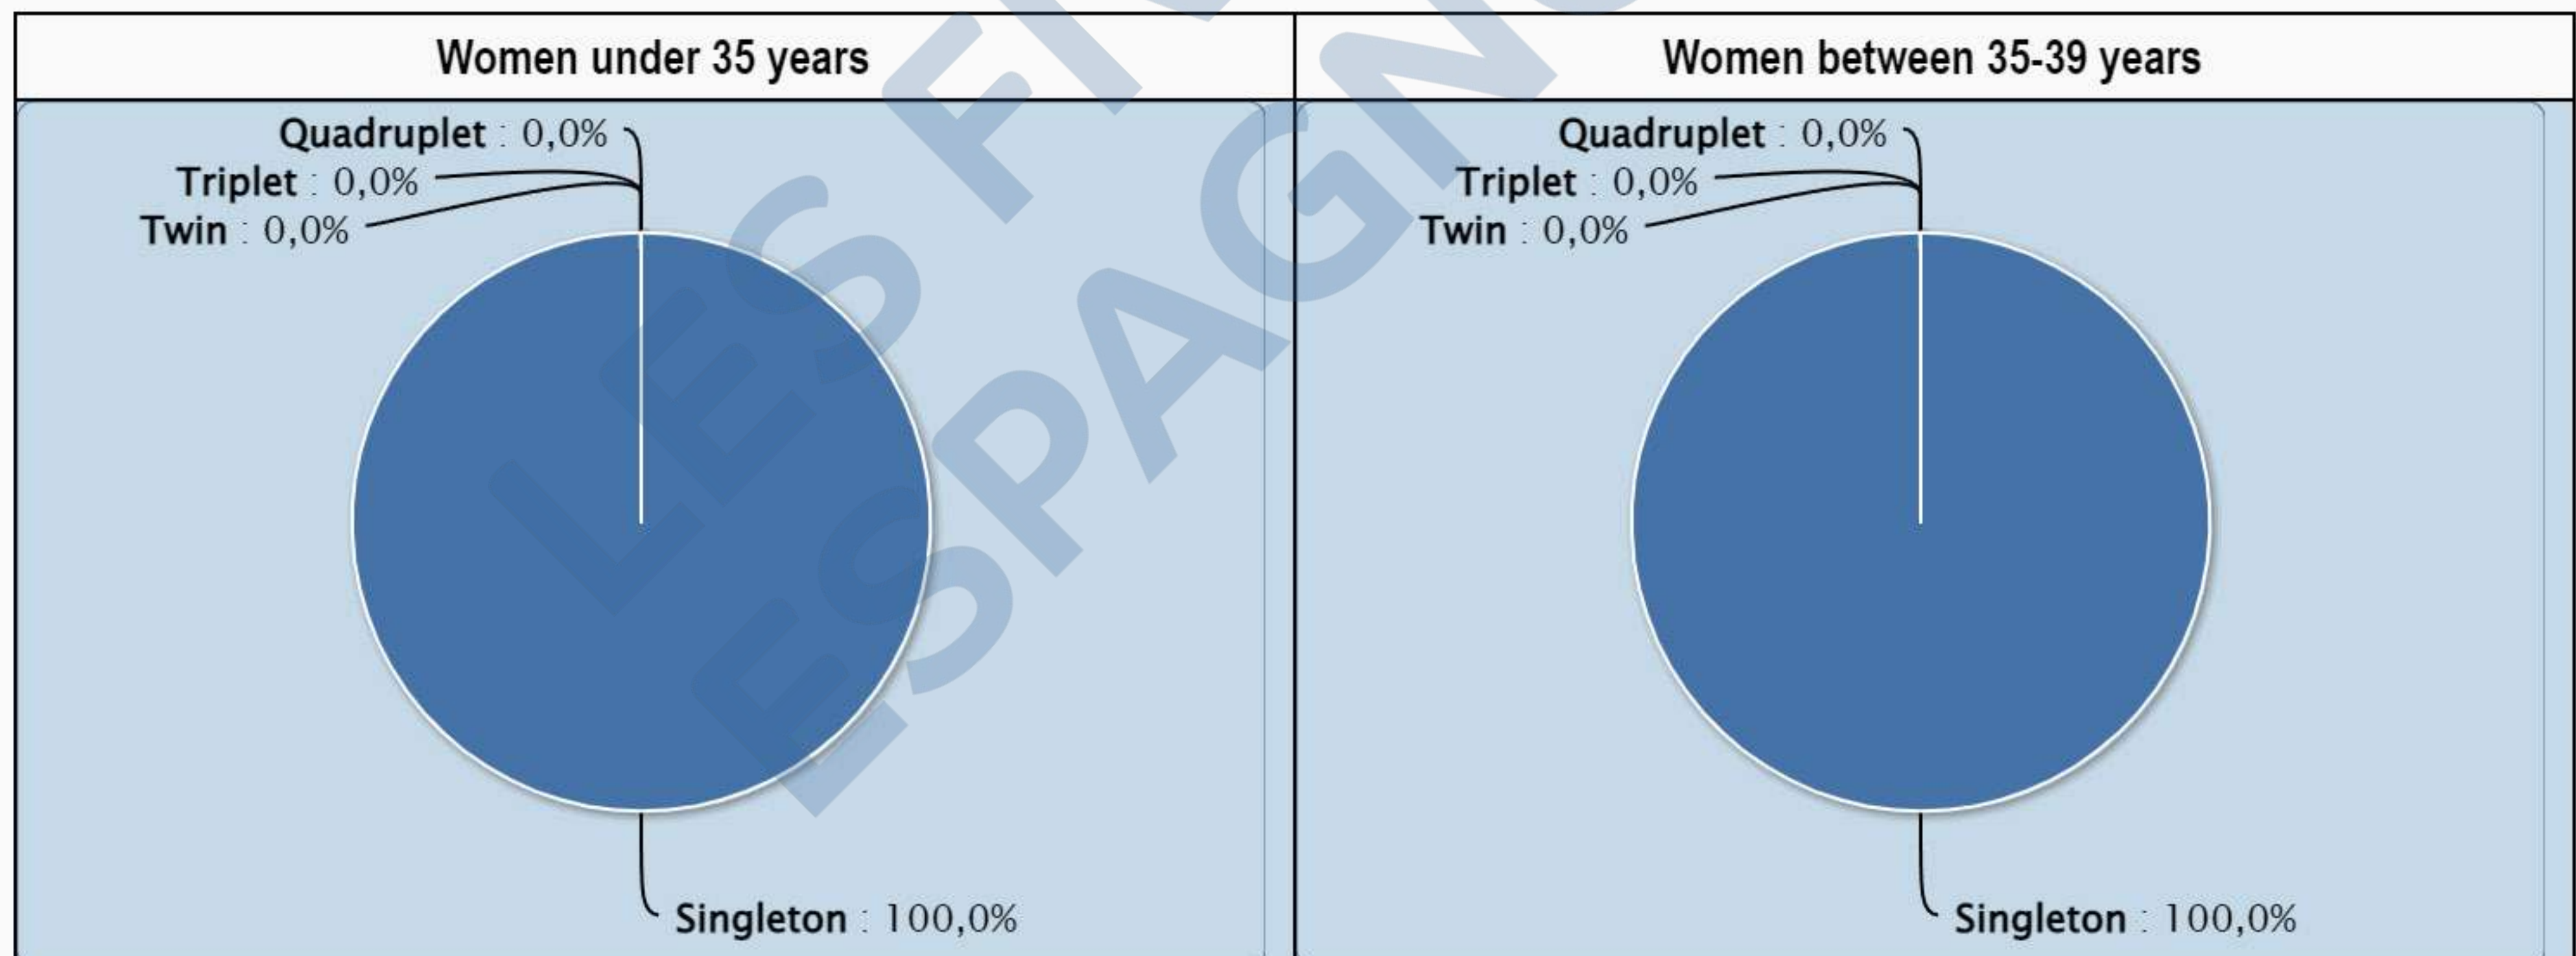

A single pregnancy is the best outcome of fertility treatments.

If you pass the mouse over the pie chart a label with the data is shown

DI cycles in women under 40 years

	Women under 35 years	Women between 35-39 years
Pregnancy rate per cycle ranges between	7.7 - 42.3	1.8 - 31.6
<i>In donor insemination, donated sperm is placed in the patient's uterus.</i>		

Type of pregnancies in DI

A single pregnancy is the best outcome of fertility treatments.

If you pass the mouse over the pie chart a label with the data is shown

IVI Sevilla

Preimplantational genetic diagnosis

	Transfers of embryos in fresh	Transfers of cryopreserved embryos
The probability of pregnancy by transfer ranges between	Does not apply	55.6 - 67.7
<i>Preimplantational genetic diagnosis: In vitro fertilization treatment performed with embryos that have been subject to genetic analysis.</i>		

Devitrified own egg cycles

	Transfers of embryos in fresh	Transfers of cryopreserved embryos
The probability of pregnancy by transfer ranges between	29.6 - 90.4	20.5 - 93.8
<i>Frozen egg cycles: In vitro fertilization treatment performed with frozen eggs. In a second stage, the eggs are defrost and fertilized.</i>		

Devitrified Egg donor

	Transfers of embryos in fresh	Transfers of cryopreserved embryos
The probability of pregnancy by transfer ranges between	56.6 - 76.7	35.8 - 59.7
<i>Frozen egg cycles: In vitro fertilization treatment performed with frozen eggs. In a second stage, the eggs are defrost and fertilized.</i>		

Embryos donation

	Transfers of cryopreserved embryos
The probability of pregnancy by transfer ranges between	16.9 - 68.8
<i>Embryos donation: The donated embryos are provided by couples subjected to In vitro fertilization.</i>	

Sperm donation

	Transfers of embryos in fresh	Transfers of cryopreserved embryos
Pregnancy probability by embryo transfer ranges between	35.2 - 84.8	33.7 - 66.3
<i>Sperm donation: In vitro fertilization treatments where the used sperm is provided by donors.</i>		

How to interpret the data of a center
