Data	results	results	results	results

#### Started cicles

Cycles for fresh fertilization	Cycles with cryopreserved embryos	
< 100	< 100	
Number of cycles in which the nationt receives medication for evarian stimulation, or ultrasound menitoring in the case of natural or		

Number of cycles in which the patient receives medication for ovarian stimulation, or ultrasound monitoring in the case of natural or replacement cycles.

### Results grouped by age of the woman

	The probability of pregnancy by embryo transfer in fresh	The probability of pregnancy by cryopreserved embryo transfer
Under 35 years	1 - 99	31.9 - 80.6
35 to 39 years	10 - 90	38.5 - 81.5
Over 40 years	Does not apply	100 - 100
The comparison of results between d	ifferent clinics could be misleading due to differences in	types of natient and treatment. Most clinics

The comparison of results between different clinics could be misleading due to differences in types of patient and treatment. Most clinics perform around the national average.

### **Embryo implantation rate**

Transfers of embryos in fresh	Transfers of cryopreserved embryos	
19 - 81	43.6 - 75.3	
The probability of transfered embryo to nest in the matrix		

## Percentage of embryos transferred

The Fertility Spanish Society recommend to transfer one or two embryos, when it's possible.

If you pass the mouse over the pie chart a label with the data is shown

# Gestation types of transfers of embryos in fresh

	Transfering a single embryo	Transfering 2 embryos	Transfering 3 embryos
Single gestations	100%	Does not apply	Does not apply
Twins gestations	0%	Does not apply	Does not apply
Triple or greater gestations	0%	Does not apply	Does not apply
A single pregnancy is the best outco	me of fertility treatments.		

#### Gestation types of transfers of embryos cryopreserved

	Transfering a single embryo	Transfering 2 embryos	Transfering 3 embryos
Single gestations	100%	Does not apply	Does not apply
Twins gestations	0%	Does not apply	Does not apply

## Donated oocytes reception cycles

Cycles for fresh fertilization	Cycles with cryopreserved embryos
< 100	< 100
In vitro fertilizartion cycles where the oocytes are provided by a donor.	

# Results grouped by age of the receiving woman

	The probability of pregnancy by embryo transfer in fresh	The probability of pregnancy by cryopreserved embryo transfer
Under 35 years	Does not apply	Does not apply
35 to 39 years	100 - 100	0 - 100
Over 40 years	29 - 96	44.1 - 94.3

The comparison of results between different clinics could be misleading due to differences in types of patient and treatment. Most clinics perform around the national average.

#### Embryo implantation rate

Transfers of embryos in fresh	Transfers of cryopreserved embryos
35.2 - 92.1	42.8 - 90.5
The probability of transfered embryo to nest in the matrix	

### Percentage of embryos transferred

### IUI cycles in women under 40 years

	Women under 35 years	Women between 35-39 years
Pregnancy rate per cycle ranges between 0 - 49.4 0 - 86.7		
In intrauterine insemination, the sperm provided by the male partner is placed in the patient's uterus		

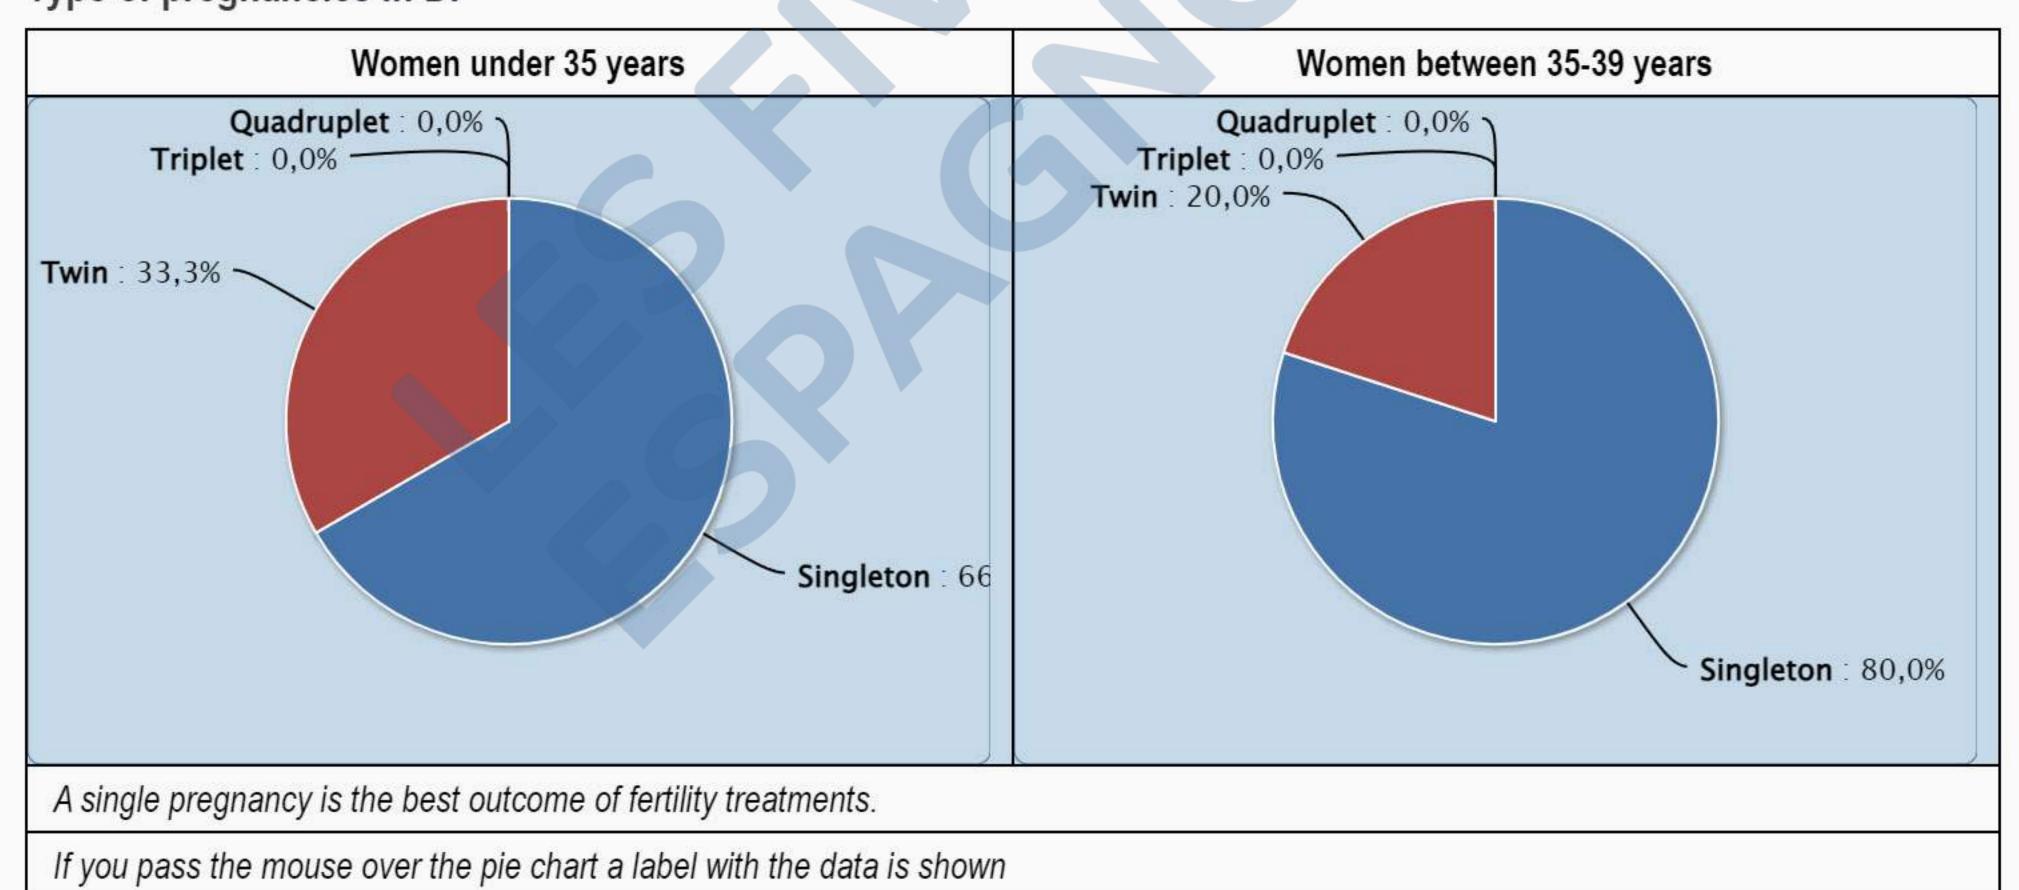

## Type of pregnancies in IUI

## DI cycles in women under 40 years

	Women under 35 years	Women between 35-39 years
Pregnancy rate per cycle ranges between	8.7 - 45.9	24.6 - 66.3
In donor insemination, donated sperm is placed in the patient's uterus.		

## Type of pregnancies in DI

Data	Own eggs IVF/ICSI	Donor eggs	IUI/DI	Other treatments
Data	results	results	results	results

# Preimplantational genetic diagnosis

	Transfers of embryos in fresh	Transfers of cryopreserved embryos
The probability of pregnancy by transfer ranges between Does not apply 48.4 - 71.1		
Preimplantational genetic diagnosis: In vitro fertilization treatment performed with embryos that have been subject to genetic analysis.		

# Devitrified own egg cycles

	Transfers of embryos in fresh	Transfers of cryopreserved embryos
The probability of pregnancy by transfer ranges between Does not apply Does not apply		
Frozen egg cycles: In vitro fertilization treatment performed with frozen eggs. In a second stage, the eggs are defrost and fertilized.		

# Devitrified Egg donor

	Transfers of embryos in fresh	Transfers of cryopreserved embryos
The probability of pregnancy by transfer ranges between	34.9 - 68	39.3 - 71.8
Frozen egg cycles: In vitro fertilization treatment performed wit	h frozen eggs. In a second stage, the eggs	are defrost and fertilized.

# **Embryos donation**

	Transfers of cryopreserved embryos
The probability of pregnancy by transfer ranges between	29 - 96
Embryos donation: The donated embryos are provided by couples subjected to In vitro fertilization.	

# Sperm donation

	Transfers of embryos in fresh	Transfers of cryopreserved embryos	
Pregnancy probability by embryo transfer ranges between 32.6 - 100 31.8 - 72.6			
Sperm donation: In vitro fertilization treatments where the used sperm is provided by donors.			

How to interpret the data of a center
